Art Unit: 3653

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-18, 22, and 23, drawn to classifier wheel, classified in class 209, subclass 714.
- II. Claims 19-21, drawn to a process for separating particulates, classified in class 209, subclass 154.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of claim 19 does not require a disk or a fastener. The apparatus of claim 1 does not require the method step of rotating a classifier wheel.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3653

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The claims stand objected to under 37 CFR 1.75(c) as being improper dependent form for failing to further limit the subject matter of a previous claim.

A claim is controlled by its preamble. A dependent claim must always fall within the scope of the preamble of its parent claim. Claims 10, 16, and 19 are considered dependent by the Office on claims 1, 10, and 16, respectively, for drawing on those parent claims by direct incorporation. When one claim invokes another claim, it is dependent upon that claim. The Applicant does not get charged for these dependent claims, or if so, gets charged much less than the filing of an independent claim. When a claim has a different preamble than another claim, it is considered distinct from said other claim, and is treated on different grounds, earning its own search and, further, a completely independent right of examination, independent from the examination of other independent claims.

The manner in which the claims appear invites the ultimatum as follows:

Application/Control Number: 09/670,884 Page 4

Art Unit: 3653

Either;

a) the claims must be put in independent form so that the Office can charge the applicant the proper fees for multiple independent claims more than 2, and only then establish a search and/or impose further restriction, or

b) the claims can be left as they appear, and the Examiner will refuse to examine all subject matter with a scope beyond that of claim 1 as intended use, discarding their significance and rejecting them out of hand.

This Application will not be Examined on the merits until it is placed in proper dependency, wherein all dependent claims further limit the scope of an independent claim in a clear and concise manner.

Additional burdens are placed upon the Office in the event that a rejection would be made on a dependent claim, while the independent claim stands patentable. New preambles incite new examination, and it is clearly possible that claim 16 could be considered rejectable under art while claim 10 would not. Therefore, a discrepancy is found which has the potential to completely confound all common Examination process, removing from the Examiner and the Applicant a proper avenue for prosecution in which allowability can be determined, a finite search can be performed, and proper fees can be calculated.

Additional burdens are placed upon the Office in that a search for a disk with a hole in it would rarely if ever produce art disclosing a classifier wheel, much less a

Art Unit: 3653

process for classifying. In searching for anticipatory references, the Examiner is bound to the scope of the preamble, and therefore has no way to meaningfully retrieve and apply references while each dependent claim crawls further and further outside the scope of the search criteria.

Examination on the merits will gladly be performed when these claims are placed in a non-objectionable format.

Again, the most significant reason this objection cannot be overlooked is the possibility that art would be applicable to a dependent claim, while not being applicable to its parent claim.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel K Schlak whose telephone number is 703-305-0885. The examiner can normally be reached on Mon-Thurs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Donald Walsh can be reached on 703-306 - 4173. The fax phone numbers for the organization where this application or proceeding is assigned are 703-306-4195 for regular communications and 703-306-4195 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308 - 1113.
